

AngularJS Filters

1. Program to apply various filters like date, uppercase, lowercase, number etc. and also apply a custom filter.

Answer:

```
<!DOCTYPE html>
<html ng-app="myApp">
<head>
  <title>AngularJS Filters</title>
</head>

<body ng-controller="myCtrl">

<h2>Built-in Filters</h2>

<p>Original Name : {{name}}</p>
<p>Uppercase : {{name | uppercase}}</p>
<p>Lowercase : {{name | lowercase}}</p>

<p>Today's Date : {{today | date:'dd/MM/yyyy'}}</p>

<p>Salary : {{salary | number:2}}</p>

<h2>Custom Filter</h2>

<p>{{name | reverse}}</p>

<script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js">
</script>

<script>

var app = angular.module("myApp", []);

app.controller("myCtrl", function($scope){
  $scope.name = "Suman";
  $scope.today = new Date();
  $scope.salary = 45678.9876;
});

app.filter("reverse", function(){
  return function(input){
    return input.split("").reverse().join("");
  };
});

</script>

</body>
</html>
```

2. Program with various services like \$location, \$http, \$timeout etc. and also use custom service.

Answer:

```
<!DOCTYPE html>
```

```

<html ng-app="myApp">

<head>
  <title>AngularJS Services</title>
</head>

<body ng-controller="myCtrl">

<p>Current URL : {{url}}</p>

<p>{{message}}</p>

<p>Custom Service : {{result}}</p>

<script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"><
/script>

<script>

var app = angular.module("myApp", []);

app.service("myService", function(){
  this.display = function(){
    return "Welcome to Custom Service";
  };
});

app.controller("myCtrl",
function($scope,$location,$timeout,$http,myService){

  $scope.url = $location.absUrl();

  $scope.result = myService.display();

  $timeout(function(){
    $scope.message = "Message displayed after 3 seconds.";
  },3000);

  $http.get("https://jsonplaceholder.typicode.com/posts/1")
  .then(function(response){
    console.log(response.data);
  });

});

</script>

</body>
</html>

```

3. Program to show various http methods like get(),post() and properties like .config, .data, .status.

Answer:

```
<!DOCTYPE html>
<html ng-app="myApp">

<head>
  <title>HTTP Methods</title>
</head>

<body ng-controller="myCtrl">

<h2>HTTP Example</h2>

<p>Status : {{status}}</p>

<p>{{data}}</p>

<script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"><
/script>

<script>

var app = angular.module("myApp", []);

app.controller("myCtrl", function($scope,$http){

$http.get("https://jsonplaceholder.typicode.com/posts/1")
.then(function(response){

$scope.status = response.status;
$scope.data = response.data.title;

console.log(response.config);
console.log(response.data);
console.log(response.status);

});

$http.post("https://jsonplaceholder.typicode.com/posts",
{
title:"AngularJS",
body:"Example",
userId:1
})
.then(function(response){

console.log(response.data);

});

});

</script>
```

```
</body>
</html>
```

4. Program that includes the Angular API like `angular.lowercase()` and `angular.uppercase()`.

Answer:

```
<!DOCTYPE html>
<html>

<head>
  <title>Angular API</title>
</head>

<body>

<script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"><
/script>

<script>

var name = "AngularJS";

document.write(angular.lowercase(name));
document.write("<br>");

document.write(angular.uppercase(name));

</script>

</body>
</html>
```

Things to know:

1. Understand the concepts of filters and API?

Answer:

AngularJS Filters

Filters are used to **format or transform data** before displaying it in the view.

Common Built-in Filters

Filter	Purpose
uppercase	Converts text to uppercase
lowercase	Converts text to lowercase
date	Formats dates
number	Formats numbers with decimal places
currency	Displays values as currency
orderBy	Sorts arrays
filter	Filters array elements

Example:

```
{{name | uppercase}}
{{today | date:'dd/MM/yyyy'}}
```

```
{{salary | number:2}}
```

AngularJS API

The AngularJS API provides built-in utility functions and services that simplify application development.

Some commonly used APIs include:

- `angular.uppercase()`
- `angular.lowercase()`
- `angular.copy()`
- `angular.forEach()`
- `angular.element()`
- `angular.isArray()`
- `angular.isObject()`

Example:

```
angular.uppercase("hello");    // HELLO  
angular.lowercase("HELLO");    // hello
```
