

CSS Page Adjustments

1. A page which specify a black border for table and if hover on it, page should change it's colour.

Answer:

```
<!DOCTYPE html>
<html>
<head>

<style>

table{
    border:2px solid black;
    border-collapse:collapse;
    width:60%;
}

th,td{
    border:2px solid black;
    padding:10px;
    text-align:center;
}

table:hover{
    background-color:lightblue;
}

</style>

</head>

<body>

<h2>Table Hover Example</h2>

<table>

<tr>
<th>ID</th>
<th>Name</th>
</tr>

<tr>
<td>101</td>
<td>Suman</td>
</tr>

<tr>
<td>102</td>
<td>Rahul</td>
</tr>

</table>

</body>
```

```
</html>
```

2. Apply different visibility by an element (visibility: hidden, visible, collapse) and use different types of display for an element (display: none, inline, block, contents, list-item)

Answer:

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
.hidden{
    visibility:hidden;
}
```

```
.visible{
    visibility:visible;
}
```

```
.collapse{
    visibility:collapse;
}
```

```
.none{
    display:none;
}
```

```
.inline{
    display:inline;
    background:yellow;
}
```

```
.block{
    display:block;
    background:lightgreen;
}
```

```
.contents{
    display:contents;
}
```

```
.listitem{
    display:list-item;
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<p class="visible">Visible Element</p>
```

```

<p class="hidden">Hidden Element</p>

<table border="1">
<tr class="collapse">
<td>Collapsed Row</td>
</tr>
</table>

<p class="none">Display None</p>

<span class="inline">Inline Element</span>

<div class="block">Block Element</div>

<div class="contents">
<span>Display Contents</span>
</div>

<div class="listitem">Display List Item</div>

</body>
</html>

```

3. A long page which should have two links "click to go to bottom of page" and "click to go to top of page" . Also set their scroll-behavior to scroll smoothly.

Answer:

```

<!DOCTYPE html>
<html>
<head>

<style>

html{
    scroll-behavior:smooth;
}

</style>

</head>

<body>

<h1 id="top">Top of Page</h1>

<a href="#bottom">Click to go to Bottom of Page</a>

<br><br>

<div style="height:1200px;">
    Scroll Down...
</div>

```

```
<h2 id="bottom">Bottom of Page</h2>

<a href="#top">Click to go to Top of Page</a>

</body>
</html>
```

4. Add padding and margin with different size and understand the difference between them.

Answer:

```
<!DOCTYPE html>
<html>
<head>

<style>

.box1{
    border:2px solid blue;
    padding:30px;
    margin:20px;
}

.box2{
    border:2px solid red;
    padding:10px 20px;
    margin:40px 10px;
}

</style>

</head>

<body>

<div class="box1">
Padding:30px
Margin:20px
</div>

<div class="box2">
Different Padding and Margin
</div>

</body>
</html>
```

5. A page with multiple background images for an webpage or element and define their adjustable sizes.

Answer:

```
<!DOCTYPE html>
<html>
<head>

<style>
```

```

body{

background-image:
url("image1.png"),
url("image2.png");

background-repeat:
no-repeat,
no-repeat;

background-position:
left top,
right bottom;

background-size:
150px 150px,
250px 250px;

}

</style>

</head>

<body>

<h1>Multiple Background Images</h1>

<p>CSS Multiple Background Example</p>

</body>
</html>

```

Things to know:

1. Difference between visibility:hidden and display:none?

Answer:

visibility:hidden	display:none
Element is hidden but still occupies space	Element is removed completely from the page layout
Layout remains unchanged	Layout adjusts as if the element does not exist
Element cannot be seen	Element is neither visible nor occupies space

2. Difference between inline and block level elements?

Answer:

Inline Elements	Block-Level Elements
Do not start on a new line	Start on a new line

Occupy only the required width	Occupy the full available width
Width and height generally cannot be set	Width and height can be set
Examples: , <a>, 	Examples: <div>, <p>, <h1>

3. What are selectors?

Answer:

Selectors are patterns used in CSS to select HTML elements and apply styles to them.

Types of Selectors

- **Element Selector:** p
- **Class Selector:** .box
- **ID Selector:** #header
- **Universal Selector:** *
- **Group Selector:** h1, p

Example:

```
p{
    color: blue;
}

.box{
    background-color: yellow;
}

#header{
    text-align: center;
}
```

4. Which property is used to set the line style for the outline?

Answer:

The **outline-style** property is used to set the line style of an element's outline.

Syntax:

```
outline-style: solid;
```

Common Values

- solid
- dashed
- dotted
- double
- groove
- ridge
- inset
- outset

Example:

```
div{
    outline-style: dashed;
    outline-color: red;
    outline-width: 3px;
}
```
