

AngularJS Elements and Validations

1. Include different form elements into your program like textbox, selectbox, checkbox and radiobutton.

Answer:

```
<!DOCTYPE html>
<html ng-app="myApp">
<head>
  <title>AngularJS Form Elements</title>
</head>
<body ng-controller="myCtrl">
<h2>Student Registration Form</h2>
<form>
```

Name:

```
<input type="text" ng-model="name">
<br><br>
```

Course:

```
<select ng-model="course">
  <option>BCA</option>
  <option>B.Sc</option>
  <option>B.Com</option>
</select>
<br><br>
```

Gender:

```
<input type="radio" ng-model="gender" value="Male">Male
<input type="radio" ng-model="gender" value="Female">Female
<br><br>
```

Skills:

```
<input type="checkbox" ng-model="java">Java
<input type="checkbox" ng-model="python">Python
<br><br>
```

```
<h3>Output</h3>
```

```
Name : {{name}}<br>
```

```
Course : {{course}}<br>
```

```
Gender : {{gender}}<br>
```

```
Java : {{java}}<br>
```

```
Python : {{python}}
```

```
</form>
```

```
<script
```

```
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"><
/script>
```

```
<script>
```

```
angular.module("myApp", [])
```

```
.controller("myCtrl",function($scope) {
});
```

```
</script>
```

```
</body>
```

```
</html>
```

2. Validate the form using required and email. Also apply a custom validation.

Answer:

```
<!DOCTYPE html>
```

```
<html ng-app="myApp">

<head>
<title>AngularJS Validation</title>
</head>

<body ng-controller="myCtrl">

<form name="myForm">

Name:

<input type="text"
name="username"
ng-model="user"
required>

<span ng-show="myForm.username.$error.required">

Name is required.

</span>

<br><br>

Email:

<input type="email"
name="email"
ng-model="email"
required>

<span ng-show="myForm.email.$error.email">

Enter a valid email.

</span>

<br><br>

Age:

<input type="number"
ng-model="age"
min="18"
```

```

max="60">

<span ng-show="age<18 || age>60">

Age should be between 18 and 60.

</span>

</form>

<script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"><
/script>

<script>

angular.module("myApp", [])

.controller("myCtrl", function($scope) {

});

</script>

</body>
</html>

```

3. Program to apply animations to ng-show and ng-hide.

Answer:

```

<!DOCTYPE html>
<html ng-app="myApp">

<head>

<title>AngularJS Animation</title>

<script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"><
/script>

<script src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular-
animate.js"></script>

<style>

.box{

width:200px;

height:100px;

background:lightblue;

```

```
padding:20px;

transition:0.5s;

}

.ng-hide{

opacity:0;

}

</style>

</head>

<body ng-controller="myCtrl">

<input type="checkbox" ng-model="show">

Show Box

<br><br>

<div class="box" ng-show="show">

AngularJS Animation Example

</div>

<script>

angular.module("myApp", ["ngAnimate"])

.controller("myCtrl",function($scope) {

$scope.show=true;

});

</script>

</body>

</html>
```

4. Program to show routing using ng-route. Also include \$routeProvider and otherwise() into your program.

Answer:

index.html:

```
<!DOCTYPE html>
<html ng-app="myApp">
<head>
```

```

<title>AngularJS Routing</title>
<script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"><
/script>
<script src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular-
route.js"></script>
</head>

<body>
<a href="#!/home">Home</a>
|
<a href="#!/about">About</a>
<hr>
<div ng-view></div>
<script>
var app=angular.module("myApp", ["ngRoute"]);
app.config(function($routeProvider) {
$routeProvider
.when("/home",{
template:"<h2>Home Page</h2>"
})
.when("/about",{
template:"<h2>About Page</h2>"
})
.otherwise({
redirectTo:"/home"
});
});
</script>
</body>
</html>

```

Things to know:

1. Understand Animations and routing.

Answer:

AngularJS Animations allow smooth visual effects when elements are shown, hidden, added, or removed from the page.

Features:

- Used with the **ngAnimate** module.
- Works with directives such as:
 - ng-show
 - ng-hide
 - ng-repeat
 - ng-if
 - ng-view

Benefits:

- Improves user experience.
- Creates smooth transitions.
- Makes web applications more interactive.
